THE PROBLEM

Why Infrastructure Projects Go Over Budget

Every infra contractor faces the same problems. Most accept them as normal. They are not.

 SITE REGISTER — DAY 14

Raju Kumar — Mason	✗ Off-site
Suresh Helper	✗ Not verified
Ahmed Painter	△ Marked absent

Fake Attendance

Supervisors mark registers manually across chainages and camps. Workers who were never on site get counted. Payroll calculations are wrong every month and disputes follow.

 MATERIAL VS PO — SITE A

TMT Bars	12 bundles short
Cement Bags	40 unmatched

Material Wastage

Materials are ordered over calls. No one checks delivery against the purchase order. Over-ordering and losses are discovered only after handover — when nothing can be recovered.

 DPR STATUS

Earthwork DPR — 3 days overdue

RCC Work DPR — not submitted

Formwork DPR — submitted today

Delayed Daily Reports

Site engineers send DPR updates over WhatsApp days after the work happens. By the time the office knows about a delay or cost issue, the damage is already done.

 SUBCONTRACTOR BILL — RAMESH CIVIL

Claimed: 4,200 sqft

Unverified

Measured: 3,140 sqft

Actual

Subcontractor Overbilling

Subcontractors bill for more work than was actually executed. Without measured quantities linked to bills, there is no way to catch it before payment goes out.

No Live Project P&L

Project cost is visible only after every bill is in — usually after handover. By then there is nothing to fix. A ₹38L overrun that built up over six months shows up as one number at the end, with no point in the timeline where action was possible.

ONE PLATFORM

One Platform Instead of **Six.**

Infrastructure sites run on WhatsApp forwards, Excel sheets, and manual registers. Onsite replaces all of them — and adds AI on top.

PLATFORM FEATURES

Everything Infra Teams Need. One Platform.

Project scheduling, resource control, financial oversight, and field connectivity — built for how infrastructure sites actually work.

PROJECT EXECUTION

End-to-End Project Planning and Scheduling

Manage every stage from DPR creation and BOQ management through to construction scheduling and task dependencies. Site engineers get their tasks on the app. The office sees what's moving and what's not — without calling anyone.

Chainage-wise activity scheduling

DPR creation and submission from mobile

Real-time delay alerts before they compound

FINANCE AND CONTRACTS

Integrated Financial and Contract Management

Multi-crore infra budgets are hard to track when your data lives across Excel sheets and Tally. Onsite pulls all of it together. Budget vs actual, vendor bill verification, milestone-based payments — visible in one place, updated as work happens on site.

Budget vs actual at chainage and package level

Vendor bill verified against measured work before payment

Tally and Zoho Books sync — no double entry

RESOURCE MANAGEMENT

Centralized Resource and Material Control

Track material procurement, deliveries, and stock levels across every site in one place. When cement arrives short or a batch gets diverted, Onsite flags it the same day. Not at handover. Getting this right saves more than most infra companies realize.

- Delivery matched to purchase order before acceptance
- Live inventory across multiple sites and camps
- Equipment utilization tracked per chainage

WORKFORCE

GPS Attendance, Payroll and Field Connectivity

Infrastructure sites spread across multiple chainages make manual attendance genuinely impossible to get right. GPS punch-in and face recognition fix this. Wages calculate automatically on verified data. Site engineers submit daily reports from their phones, not from memory two days later.

Finally know what is happening at every chainage without calling anyone

We were managing multiple road packages and spending most of the day following up with site engineers on WhatsApp for progress updates. With Onsite, each chainage section has its own activity tracking and the DPRs come in from site on time. Office knows where things stand every morning without anyone having to ask.

Payroll disputes dropped to almost zero after GPS attendance

Our sites are spread across remote locations and manual attendance was a constant problem. Workers disputed wages every month and supervisors had no way to prove the records were accurate. GPS punch-in through Onsite changed this completely. The data is there, wages calculate automatically, and disputes have nearly stopped. That alone made it worth switching.

Caught two subcontractor overbills in the first month itself

We had subcontractors claiming work quantities that our engineers had not verified. Earlier there was no easy way to check before payment went out. Onsite made site measurement a mandatory step before bill approval. In the first month we caught two bills where the claimed quantity did not match what was actually done. That saved more than what we paid for the software for the whole year.

Infrastructure and Civil · India

Material shortages stopped surprising us midway through work

The biggest problem on our sites was finding out material was short only after work had already started and progress was blocked. Now every delivery is checked against the purchase order in Onsite before it is accepted. Stock levels update in real time. We see potential shortages three or four days in advance and can act on it. That has reduced idle time from equipment and labour waiting for material significantly.

FAQ

Questions infrastructure companies ask before starting

Does Onsite work for road and highway projects with multiple chainages?

+

Can site engineers submit DPRs from mobile on site?

+

How does Onsite handle vendor bill verification for infrastructure contracts?

+

Does it integrate with Tally and Zoho Books?

+

Can Onsite track labour attendance across remote sites and camps?

+

How long does it take to get an infrastructure project running on Onsite?

+

Can I see a live P&L across multiple project packages?

+

What does Onsite cost for infrastructure companies?
