Trusted by leading construction companies for construction reporting

Who This Construction Reporting & Analytics Software Is Built For

01

CEOs & Project Directors

Get a single, company-wide view of all projects with executive dashboards covering project health, cost vs budget, cash flow indicators, and performance trends—updated automatically as site

02

Project Managers

Track daily progress, material consumption, labour productivity, and schedule deviations through real-time project analytics. Spot issues early, compare planned vs actual performance,

03

Finance & Procurement Teams

Monitor purchase spends, vendor-wise costs, pending bills, and budget utilization using accurate, auto-synced construction reports. Replace manual reconciliations

data flows in. Make strategic decisions
without waiting for weekly MIS reports.

and take corrective action before delays
or overruns escalate.

with reliable cost and performance
reporting across all active sites.

How Onsite Reports & Analytics Work

Onsite brings every business metric into one powerful, real-time analytics engine:

50+ Ready-Made Reports

Material usage, labour, subcontractor billing, progress tracking, budgets, profit, productivity, inventory, invoicing, vendor spends — everything in one place.

Customizable Filters for Deep Analysis

Drill down by project, date range, team, department, vendor, or site.

Intelligent Dashboards

Export & Share Easily

See real-time KPIs for financial control, progress tracking, and operational efficiency.

Generate PDF/Excel reports for management meetings, client sharing, or internal monitoring.

Industry Challenges

Why Companies Choose Onsite Construction Reporting & Analytics Software

Lack of Real-Time Project Visibility

Most construction teams rely on delayed MIS reports, Excel sheets, or WhatsApp updates—by the time data reaches management, it's

Inability to Track Cost & Budget Deviations Early

Cost overruns often surface only after bills are processed or month-end reviews are

Fragmented Data Across Teams & Tools

Project, finance, procurement, and management teams often work on disconnected systems, leading to mismatched numbers and reporting

No Clear Measurement of Project Performance & Productivity

Without standardized KPIs, construction performance is judged subjectively—making it hard to improve

already outdated. Onsite's construction reporting and analytics software delivers real-time project dashboards that consolidate progress, costs, and productivity across sites—so decisions are based on live data, not assumptions.

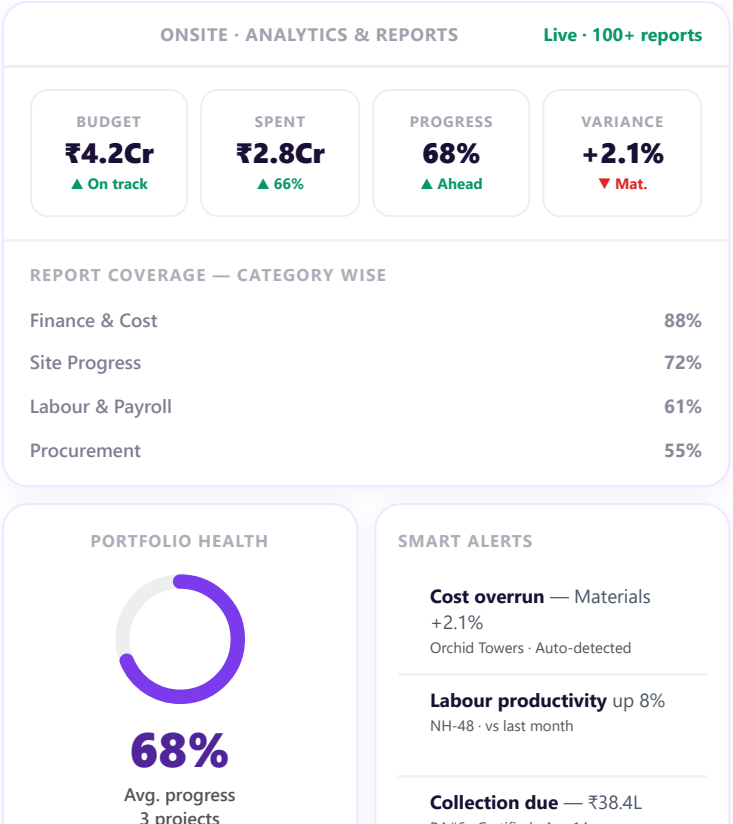

done. By then, recovery is difficult. With cost vs budget analytics, Onsite continuously compares planned and actual spends—helping teams identify leakages, deviations, and risk areas early instead of reacting late.

conflicts. Onsite acts as a single source of truth, auto-syncing site data into centralized construction reports and executive dashboards—ensuring everyone sees the same, verified numbers.

productivity or forecast outcomes. Onsite enables KPI tracking for construction projects, covering progress, labour efficiency, material usage, and trends—turning raw data into actionable insights through visual analytics.

Core Features of Onsite Construction Reporting Software

Control subcontractor scope, execution, billing, and payments at every stage with digital work orders, milestone tracking, retention management, and approval workflows.

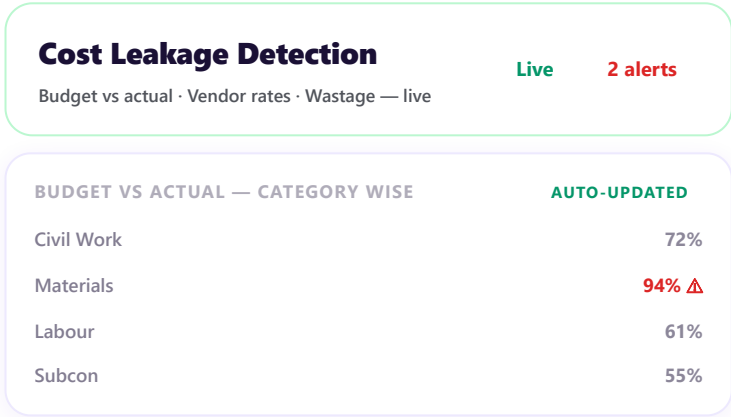

Get Real-Time Visibility Across All Projects

Access live dashboards that consolidate progress, costs, labour, materials, subcontractors, and billing — all in one place.

- ✓ Monitor project health instantly
- ✓ Access real-time progress & productivity metrics
- ✓ Stop delays and overruns before they escalate

Identify Cost Leakages Before They Become Losses

Link budgets, actuals, bills, and material usage to detect overspending immediately. Make decisions early — not after the

project is over.

- ✔ Compare budget vs actuals live
- ✔ Track vendor performance & rate trends
- ✔ Detect material or labour wastage instantly

Make Faster Decisions With Automated Reporting

Say goodbye to manual Excel reports. Onsite generates accurate, shareable analytics instantly. Leadership gets clarity. Teams save hours.

- ✔ Export PDF/Excel in one click

- ✓ Auto-generated DPRs, cost reports & dashboards
- ✓ Spend time analyzing, not collecting data

What Construction Companies Say About Onsite Construction Reporting Software?

CUSTOMER SUCCESS STORY

“

I was running seven projects simultaneously and getting project updates through WhatsApp messages and weekly Excel files from site managers. By the time I read the report, the numbers were already

three days old and the situation on site had changed. I was making critical decisions based on data that was never current. **Onsite gives me a live dashboard showing cost position, progress, and outstanding issues across all seven projects at the same time.** I now spend my Monday morning reviewing actual data instead of chasing updates. The visibility alone changed how I run this business.

✕ BEFORE ONSITE

WhatsApp updates and weekly Excel files · Data 3 days old before it reached leadership · Decisions based on stale numbers across 7 projects

✓ AFTER ONSITE

Live dashboard — cost, progress, and issues across all projects simultaneously · Real-time data every morning · Leadership decisions backed by current facts

Mr. Karthik Sundaram, Managing Director

Sundaram Projects Pvt. Ltd. · Multi-Site Residential & Commercial · Chennai, Tamil Nadu

FAQs

What is Onsite's Construction Reporting and Analytics Software?

Onsite's construction reporting and analytics software is a centralized system that converts live site data into structured reports, dashboards, and performance insights. It helps construction companies track project progress, costs, productivity, and overall project health in real time—without relying on manual Excel-based reporting.

Why do construction companies need reporting and analytics software?

Construction projects generate large volumes of data across sites, teams, and processes. Without a reporting and analytics system, this data remains fragmented and delayed. Onsite automates progress reporting, cost analysis, and KPI tracking—allowing teams to identify issues early, reduce decision delays, and maintain better control over execution.

Does Onsite provide real-time project dashboards?

Yes. Onsite offers real-time project dashboards that visually display key metrics such as progress percentage, cost performance, productivity trends, and pending actions. These dashboards update automatically as site data is recorded, giving management live visibility without waiting for manual updates.

How does Onsite help with cost vs budget analytics?

Onsite continuously compares planned budgets against actual expenses recorded from procurement, labour, and site usage. This allows teams to track deviations early, identify cost leakages, and take corrective actions before overruns escalate.

How does Onsite ensure my reports are always accurate?

Onsite syncs data in real time from your site teams, procurement entries, bills, and progress updates — ensuring your reports always reflect the latest status.

Can I customize reports based on my business needs?

Yes. You can filter by project, vendor, activity, date range, department, and even user-defined fields.

Does Onsite replace the need for Excel reporting?

Yes. Onsite automates all major construction reports. You can still export to Excel if your clients or auditors need it.

What kind of KPIs can leadership track?

Budget vs actuals, material consumption, labour strength, subcontractor performance, project delays, billing status, cash flow trends, and more.

Does Onsite provide an audit trail of all approvals?

Yes. Every action is logged with a timestamp, approver name, comments, and status — ensuring full transparency.

Onsite is a construction management software built to help construction companies run projects with clarity and control. As a complete construction ERP software, it connects site teams, project managers, procurement, and finance on one platform. By replacing scattered tools and manual tracking, Onsite construction software helps businesses save time, reduce cost leakages, and improve execution across every project. The result is a practical ERP software that supports real site operations, not just reports.
